	Examiner Houshang Safaipoor	Art Unit 2625	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inoue Rieko (JP 09-284572, cited by the applicant), and further in view of Iida (US 2002/0124130).

Regarding claim 2, Rieko discloses an image processing device comprising:

an image data input unit for inputting image data [0022]; an image data storage unit for storing the image data input through the image data input unit [0047]; an image data processing unit for processing the image data stored in the image data storage unit [0035]; and an image data invalidation (elimination) unit for invalidating the image data stored in the image data storage unit (0051-0055)];

Rieko does not explicitly disclose that when there is input of a new image data through said image data input unit after a preceding image data has been processed but before said image data invalidation unit has started the invalidation of said preceding image data stored in said image data storage unit, said image data invalidation unit is configured to store said new image data being input to said device. Iida discloses a memory controller where new data is written into the memory block and the old data is then deleted from the occupied block (page 13, claim 8). Therefore it would have been obvious to a person of ordinary skill in the art to use such memory

controller in Rieko's image processing unit to enhance storing new image data and deleting the old.

Regarding claims 3 and 4 deleting, concurrently, one or more stored images from the memory is well known and routinely implemented in the art.

Allowable Subject Matter

Claims 1 and 5-13 are allowed.
